

## WRITTEN PLAN

---

### GALLERY

- Create a reference for every image in the gallery container using `document.querySelectorAll()`
- Add an event listener for every image, listen for a 'click' and run the function `open lightbox`.
- On this function, add the class "lightbox-on" and add the source of the image that will be displayed in the light box.
- Create a reference for the class "lightbox-close" using `document.querySelector()`
- Add an event listener to this variable, listen for a 'click' and run the function `closeLightbox`.
- On the function `closeLightbox`. Remove the class `lightbox-on`

### NAVIGATION SCROLL CONTENT

- Create a reference for every anchor tag in the header and footer navigation using `document.querySelectorAll()`
- Add an event listener to every anchor tag, listen for a "click" and run the function `scrollLink`.
- On the function `scrollLink` get the target id of the event and using the Tweenlite library use the method `{scrollTo:}` and scroll to the id that matches the current target id.

## NEWSLETTER ACCORDION

- Create a reference for every element with a class of "accordion" using `document.querySelectorAll()`
- Add an event listener for every element with a class of "accordion", listen for a click and run the function `openClose`
- In this function using the `e.currentTarget.Classlist` we will toggle the class "isOpen".
